

# Optometry and vision sciences

## Vision Science and Optics

The Department of Optometry and Vision Sciences provides a series of subjects in visual and optical science to BSc students that will lead to a major in vision sciences. Vision science is the study of the eye, vision and optics. The visual science subjects, of which there are ten, aim to provide students with a thorough knowledge of the eye and visual performance together with an understanding of the physiological processes underlying vision. The three subjects in optical science aim to provide an understanding of optical systems and the ability to analyse the performance of optical systems, as well as the ability to develop designs for optical systems to specified performance criteria.

The subjects available to BSc students are:

- 655-101 Optical Systems (p.853)
- 655-111 Vision: How The Eye Sees The World (p.853)
- 655-210 Optical Design and Ophthalmic Metrology (p.853)
- 655-211 Ocular Anatomy & Histology (p.853)
- 655-221 Human Visual Functions (p.853)
- 655-222 Visual Processing and Control (p.854)
- 655-321 Visual Physiology and Perception (p.854)
- 655-331 Light & Image Formation: Applications (p.854)
- 655-351 Ophthalmic Prosthetics I (p.854)
- 600-311 Research Project A (p.879)
- 600-312 Research Project B (p.879)

All the subjects are 12.5 points.

BSc student who have completed the recommended subjects in visual and optical sciences and who gain entry into the Bachelor of Optometry course may be given credit for the equivalent subjects within the optometry degree. Successful applicants, providing their previous subjects taken are equivalent to the first year of the optometry course, would be entering into the second year of the course. BSc(Hons) degree students who have passes in the BSc optics and vision science subjects offered, may qualify for entry into the third year of the optometry course.

## Optometry

The Department of Optometry and Vision Sciences is responsible for the four-year course leading to the degree Bachelor of Optometry. Optometry is a professional discipline based on the optical and visual sciences. The practice of optometry involves the diagnosis and treatment of functional disorders of the eye and vision: the optometrists' job is to solve patients visual problems. The full list of subjects in the Bachelor of Optometry course is given on page 779.

## Optometry subject descriptions

### Available to BSc students

#### 655-101 Optical Systems

**Credit points:** 12.5 **HECS-band:** 2

**Coordinator:** Assoc Prof G Smith

**Contact:** 36 lectures (three per week), 12 tutorials, 36 hours practical work and computer assisted learning (*Semester 2*).

**Description:** The objective of this subject is to enable students to understand the passage of light through optical systems, the formation of optical images and the principal optical phenomena. It includes the study of Gaussian optics, the aberrations of optical systems and image quality, diffraction, interference, polarisation and thin film and fibre optics. This knowledge will be applied to a study of common optical instruments and the optics of the human eye. The practical classes are designed to help students understand the concepts discussed in lectures and to give them experience in the manipulation of optical systems and in optical calculations. Practical classes include computer-aided learning of optical principles and systems.

**Assessment:** A 3-hour written examination at the end of the semester. There are weekly tests associated with the practical classes which together with an assessment of practical work will contribute 30% of the final mark. A pass must be obtained for the practical work.

**Prescribed texts:** G Smith and D A Atchison, *The Eye and Visual Optical Instruments*, Cambridge University Press, 1997.

#### 655-111 Vision: How The Eye Sees The World

**Credit points:** 12.5 **HECS-band:** 2

**Coordinator:** Dr M Kalloniatis

**Contact:** 24 lectures (two per week), 2 reading assignments and 12 hours of practical and tutorial classes (*Semester 1*).

**Description:** This subject aims to provide an understanding of basic vision functions and visual perception. Topics to be covered include light, its measurement and quantification, the transmission characteristics of the eye and perceptual attributes; basic anatomy of the eye and visual pathways as they relate to visual perception and refractive error (near-sightedness, far-sightedness and astigmatism); and experimental approaches used to measure sensory modalities (i.e. threshold and suprathreshold psychophysical paradigms). Topics to include the fundamental attributes of our monocular processes such as the perception of colour, temporal (flicker) vision, form (spatial) vision and the space sense; and basic binocular function including the perception of depth and stereopsis. You will learn what '20/20 vision' means and why we perceive depth with the 'magic eye' pictures. Congenital and acquired visual anomalies will be used throughout the course to illustrate visual dysfunction.

**Assessment:** A 2-hour written examination at the end of semester (comprising a combination of multiple choice and written answers). Practical work will comprise 15% of the total mark.

**Prescribed texts:** S H Schwartz, *Visual Perception: A Clinical Orientation*, Appelton and Lange, 1994.

#### 655-210 Optical Design and Ophthalmic Metrology

**Credit points:** 12.5 **HECS-band:** 2

**Coordinator:** Assoc Prof G Smith

**Prerequisites:** 655-101 Optical Systems, or with the approval of the head of department.

**Contact:** 36 lectures (three per week), 24 hours practical work including assignments on optical design. There will also be assignments on ophthalmic lens calculations to complete during the semester (*Semester 2*).

**Description:** The purpose of this subject is to provide an understanding of the principles and techniques of optical design including an understanding of the control and optimisation of aberrations. It is an introduction to ophthalmic lenses and spectacle lens design. The topics covered include aberration theory, optical design and control of aberrations including the design of ophthalmic lenses, advanced photometry and radiometry, and optics of commonly used ophthalmic instruments. Practical classes will include computer-aided tutorials on both optical design and lens calculations.

**Assessment:** A 3-hour written examination at the end of the semester (80%). Assessment of practical work and assignments (20%). A pass must be obtained for both the written and practical work.

**Prescribed texts:** G Smith and D A Atchison, *The Eye and Visual Optical Instruments*, Cambridge University Press, 1997. • M Jalie, *The Principles of Ophthalmic Lenses*, 4th ed., Assoc Brit Disp Opticians, 1984. • D B Henson, *Optometric Instrumentation*, 2nd ed., Butterworths, 1996. An additional reference list will be provided.

#### 655-211 Ocular Anatomy & Histology

**Credit points:** 12.5 **HECS-band:** 2

**Coordinator:** Dr Erica Fletcher

**Prerequisites:** Biology 600-141 plus 600-142; chemistry 610-141 plus 610-142.

**Contact:** 36 lectures (three per week), 24 hours of practical and tutorial classes (*Semester 1*).

**Description:** This subject covers the detailed anatomy and histology of the eye, orbit and visual pathways. Upon completion of this subject students should comprehend the terminology of histology and cytology; be able to identify and interpret the light and electron microscopic appearance of cells and tissues; the histology of the eye, orbit and visual pathways; the embryological development of the eye; the neuroanatomy of the visual pathways. A series of lectures will give an introduction to histology and will be supplemented by practical work on examination of histological preparations. Detailed topographic anatomy of the orbit, eye and visual pathway, including the extra-ocular muscles and their actions will be studied. A further series of lectures will be given on the histology and detailed ultrastructural anatomy of the eye, orbit and visual pathways with associated practical classes.

**Assessment:** A 2-hour written examination (80%) and assessment of practical work (20%).

**Prescribed texts:** A J Bron, R C Tripathi and B J Tripathi, *Wolff's Anatomy of the Eye and Orbit*, 8th ed., Chapman and Hall, 1997.

#### 655-221 Human Visual Functions

**Credit points:** 12.5 **HECS-band:** 2

**Coordinator:** Dr M Kalloniatis; Assoc Prof A J Vingrys

**Prerequisites:** A first year mathematics is recommended, but not a prerequisite

**Contact:** 24 lectures (two per week), 36 hours practical work (3 hours per week) and computer assisted learning (*Semester 1*).

**Description:** This subject gives a detailed account of the capabilities of the human visual system and an introduction to theories of visual function. Expe-

rience is gained in the laboratory classes in measuring visual functions and in using classical visual psychophysical methodology. The topics covered are the specification of the visual stimulus, the light sense including spectral luminous efficiency, light and dark adaptation and increment thresholds; temporal resolution and critical fusion frequency; the form sense including visual acuity and the contrast sensitivity function, the colour sense and theories of colour vision, the visual space sense, including binocular correspondence, the horopter, fusion and stereopsis.

**Assessment:** A 3-hour written examination at the end of the semester (85%). Practical work (15%). A pass must be obtained for the practical work.

**Prescribed texts:** W M Hart (ed), *Adler's Physiology of the Eye, Clinical Applications*, 9th ed., Mosby, 1992. • S H Schwartz, *Visual Perception: A Clinical Orientation*, 2nd ed., Appleton and Lange, 1994.

### 655-222 Visual Processing and Control

**Credit points:** 12.5

**HECS-band:** 2

**Coordinator:** Dr M Kalloniatis; Assoc Prof A J Vingrys

**Prerequisites:** Optometry 655-221; Physiology 536-201 or equivalent

**Contact:** 24 lectures (two per week) 36 hours practical (3 hours per week) work and computer assisted learning (*Semester 2*).

**Description:** This subject gives an overview of the physiological processes underlying vision and the control of eye movements. The series of lectures on visual processing will deal with the photoreceptors and phototransduction, the organisation and function of the retina, the lateral geniculate nucleus, the superior colliculus and the visual cortex. The second series of lectures on ocular control will deal with muscular mechanisms of the eye including the mechanics of translatory, saccadic and slow pursuit eye movements, Listing's Law, neural control of eye movements and binocular eye movements, Hering's Law, accommodation and the accommodative-convergence synkinesis and pupillary reactions.

**Assessment:** A 3-hour written examination at the end of the semester (85%). Practical work (15%).

**Prescribed texts:** J G Nicholls, A R Martin and B G Wallace, *From Neuron to Brain*, 3rd ed., Sinauer Associates Inc, 1992. • W M Hart (ed), *Adler's Physiology of the Eye, Clinical Applications*, 9th ed., Mosby, 1992.

### 655-321 Visual Physiology and Perception

**Credit points:** 12.5

**HECS-band:** 2

**Coordinator:** Dr M Kalloniatis

**Prerequisites:** Optometry 655-221, 655-222; biochemistry and molecular biology 521-204 or equivalent. Exemption may be obtained with the approval of the head of department.

**Contact:** 48 hours of lectures, tutorials and seminars (*Semester 1*).

**Description:** This subject provides students with a thorough understanding of processing of visual information by the visual pathways (retino-geniculate-striate system) and the physiology of other ocular components. The subject is presented in a problem-oriented approach and is therefore designed to develop students' skills in reading, analysing and debating scientific papers in the vision sciences. The topics to be studied include the neuro-anatomy of the visual pathways in the context of functional deficits; neuro-transmitters and synaptic circuits; regulation of visual sensitivity, including perception of motion; retinal and cortical electro-physiological responses; post-natal visual development; ocular growth and factors affecting refractive development of the eye; and corneal function and the effects on corneal function of metabolic stress.

**Assessment:** A 2-hour written examination at the end of the semester (60%). Seminar participation and presentations (40%). A pass must be obtained for seminar participation.

**Prescribed texts:**

Comprehensive reading material in the form of reference lists and reference material will be provided.

### 655-331 Light & Image Formation: Applications

**Credit points:** 12.5

**HECS-band:** 2

**Coordinator:** Assoc Prof G Smith

**Prerequisites:** 655-101 Optical Systems. Students without the above prerequisite may be admitted to the subject by the head of department.

**Contact:** 24 hours of lectures, 2 reading assignments and 24 hours of tutorial/practical classes (*Semester 1*).

**Description:** By the completion of this subject students should have a sound understanding of light and image formation and the measuring techniques required to quantify them with direct applications to industrial and commercial environments. Students will learn the standard way of defining and measuring colours in industrial and clinical situations and the importance of colour contrast to maximize information display, both with respect to health and safety situations and in the advertising arena. Students will learn about image formation and visibility, including the neural and optical limits of vision,

vision through the atmosphere and techniques in specifying vision. The use of optical instruments to improve visual acquisition through devices such as telescopes, microscopes, image intensifiers will be covered in detail. The optics and ergonomics of display systems including computer displays, virtual reality systems, photographic displays, liquid crystal displays will be covered and the information capacity and man-machine interface of these displays will also be detailed. The optics and technology behind modern imaging systems used in medical and laboratory sciences including scanning laser techniques for imaging the eye or other living structures, confocal microscopy, ultrasound imaging techniques and magnetic resonance imaging techniques will also be covered.

**Assessment:** A 2-hour written examination and assignments throughout the semester.

### 655-351 Ophthalmic Prosthetics I

**Credit points:** 12.5

**HECS-band:** 2

**Coordinator:** Dr C L Cottrill

**Prerequisites:** Optometry 655-101, 655-210

**Corequisites:** Optometry 655-330, 655-340 (Applies to BOptom students only)

**Contact:** 24 lectures (two per week), 24 hours practical classes and 12 hours of tutorial/computer aided learning (CAL) (*Semester 1*).

**Description:** On completion of this subject, students should be familiar with the properties of ophthalmic optical materials and the indications for their use. Understand the optics of ophthalmic lenses and be able to calculate the performance characteristics of ophthalmic lenses and optical devices. Students will be able to dispense prescriptions and check dispensed visual aids to Australian standards. The subject will cover the properties of ophthalmic materials; the optics and design of bifocal and multifocal lenses relating to dispensed spectacle corrections; magnification effects, eikonic corrections and low vision aids; absorptive lenses; safety lenses; ophthalmic dispensing techniques; frame design, materials and adjustments; and dispensing tolerances, prescription verification and vertometry. The practical classes will introduce students to the processes of ophthalmic dispensing. The CAL will include a series of assignments that must be completed and submitted during the semester. Some of these will draw on knowledge from both 655-101 and 655-210.

**Assessment:** A practical examination in ophthalmic lenses (25%); a 2-hour written examination (75%). Students will be required to pass both practical and written examination components of the assessment and will also need to satisfactorily complete all of the CAL assignments to obtain a pass in this subject.

**Prescribed texts:** M Jalie, *Ophthalmic Lenses and Dispensing*, Butterworths, 1999. An additional reference list will be provided.

### Available to BOptom students only

### 655-121 Fundamentals of Optometric Science

**Note:** This subject is only available to BOptom students.

**Credit points:** 12.5

**HECS-band:** 2

**Coordinator:** Dr M Kalloniatis

**Contact:** 36 lectures (three per week), 24 hours of practical classes and 12 hours of computer aided tutorials (*Semester 1*).

**Description:** This subject aims to provide a basic understanding of vision functions, visual perception, ocular anatomy and anatomy of the visual pathways. Topics to be covered include light, its measurement and quantification, the transmission characteristics of the eye and perceptual attributes; anatomy of the eye and visual pathways as they relate to visual perception and refractive error (near-sightedness, far-sightedness and astigmatism); detailed topographic anatomy of the orbit, eye and visual pathway, including the extra-ocular muscles and their actions; and experimental approaches used to measure sensory modalities (i.e. threshold and suprathreshold psychophysical paradigms). Topics will also include the fundamental attributes of our monocular processes such as the perception of colour, temporal (flicker) vision, form (spatial) vision and the space sense; and basic binocular function including the perception of depth and stereopsis. Congenital and acquired visual anomalies will be used throughout the course to illustrate visual dysfunction, including structure/function relationships in the anatomical studies.

**Assessment:** A 3-hour written examination (comprising a combination of multiple choice and written answers), and a 30-minute practical examination, at the end of semester (15%). Practical work assessed throughout the semester will comprise 15% of the total mark.

**Prescribed texts:** S H Schwartz, *Visual Perception: A Clinical Orientation*, 2nd ed., Appleton and Lange, 1994. • A J Bron, R C Tripathi and B J Tripathi, *Wolff's Anatomy of the Eye and Orbit*, 8th ed., Chapman and Hall, 1997.

### 655-201 Anatomy & Histology of the Eye

**Note:** This subject is only available to BOptom students.

**Credit points:** 12.5**HECS-band:** 2**Coordinator:** Dr E L Fletcher**Prerequisites:** Optometry 655-201; biology 600-141 plus 600-142; chemistry 610-006.**Contact:** 24 lectures (two per week), 24 hours of practical and tutorial classes (*Semester 1*).

**Description:** This subject covers the detailed anatomy and histology of the eye, orbit and visual pathways. Upon completion of this subject students should comprehend the terminology of histology and cytology; be able to identify and interpret the light and electron microscopic appearance of cells and tissues; the histology of the eye, orbit and visual pathways; the embryological development of the eye; and the neuroanatomy of the visual pathways. A series of lectures will give an introduction to histology and will be supplemented by practical work on examination of histological preparations. A further series of lectures will be given on the histology and detailed anatomy of the eye, orbit and visual pathways with associated practical classes.

**Assessment:** A 2-hour written examination at the end of semester (80%) and assessment of practical work (20%).

**Prescribed texts:** A J Bron, R C Tripathi and B J Tripathi, *Wolff's Anatomy of the Eye and Orbit*, 8th ed., Chapman and Hall, 1997.

### 655-330 Functional Disorders of Vision

**Note:** This subject is only available to BOptom students

**Credit points:** 25**HECS-band:** 2**Coordinator:** Prof N A McBrien**Prerequisites:** Optometry 655-101, 655-210, 655-222**Corequisites:** Optometry 655-340, 655-351, 655-352

**Special requirements:** Students should have an approved direct ophthalmoscope and retinoscope, gonioscopy, binocular indirect ophthalmoscope, two fundus lenses epilation forceps, two white coats, pre-focused pen torch or transilluminator, inter-pupillary rule, a set of optical screwdrivers, cover paddle, phoria card and a set of four flippers. Students are strongly advised to purchase their own equipment which they will continue to use in fourth year and after graduation. However, those students who do not have their own equipment will be able to borrow equipment for classes. Students are required to conform to the dress and conduct requirements of the Board of Management of the Clinic of the Victorian College of Optometry when assigned to the clinic.

**Contact:** 72 lectures (three a week), 144 hours practical work (six hours a week through the year) which includes rostered clinical practice in the last 8 weeks of Semester 2 (*Year long*).

**Description:** This subject gives a detailed account of the nature, origins, course, treatment and prognosis of the congenital and developmental disorders of vision and provides training in the optometric procedures for the examination of the eyes and for the treatment of visual disorders. On completion of the subject students will be able to investigate patients' visual problems, make a diagnosis and plan an appropriate course of management. Topics include refractive anomalies of the eye including explanations of the origin and development of refractive errors and methods of refraction; anomalies of accommodation including presbyopia; the anomalies of ocular motility and binocular vision including their clinical assessment and treatment; disorders of the light sense; strategies of problem solving, history taking and case assessment. A series of lectures in Semester 2 is devoted to scientific method in the clinical sciences. Practical sessions introduce students to the methods of determination of refraction, assessment and treatment of disorders of ocular motility and binocular coordination, and the detection of ocular disease. Students are required to complete weekly assignments to develop their clinical skills. In the last eight weeks of Semester 2, students undertake clinical practice and the examination of patients in the clinic.

**Assessment:** A 3-hour written paper at the end of Semester 1 and a 3-hour written paper at the end of Semester 2. A 75-minute practical examination in clinical methods is held at the end of Semester 1 which must be passed in order to proceed with clinical practice in Semester 2. A 1-hour practical examination in advanced clinical methods is held at the end of Semester 2 which must be completed satisfactorily in order to pass the subject. Students must also achieve a satisfactory standard in clinical practice to pass the subject. Reports on clinical methods assignments contribute 15% to the final mark.

**Prescribed texts:** A G Bennett and R B Rabbetts, *Clinical Visual Optics*, 3rd ed., Butterworths, 1998. • M Scheiman and B Wick, *Clinical Management of Binocular Vision*, Philadelphia Lippincott, 1994. • K Zadnik, *The Ocular Examination, Measurements and Findings*, W B Saunders, 1997.

### 655-340 Diseases of The Eye

**Note:** This subject is only available to BOptom students.

**Credit points:** 25**HECS-band:** 2**Coordinator:** Assoc Prof A J Vingrys

**Prerequisites:** Anatomy and cell biology 516-201, 516-203, 516-208; pathology 531-202

**Corequisites:** Microbiology 526-306; pharmacology 534-307; optometry 655-330, 655-351, 655-352.

**Contact:** 72 lectures (three a week) and 12 2-hour demonstration classes (*Year long*).

**Description:** On completion of this subject, students will be thoroughly familiar with the nature, origins, course and prognosis of diseases of the eye, have a sound understanding of the treatment of the most commonly presenting eye diseases and will have acquired the skills necessary for the examination of the eyes for signs of eye disease and the ability to make a diagnosis. The subject covers the pathology, cause, course and clinical management of ocular diseases and of systemic diseases having ocular manifestations.

**Assessment:** A 2-hour written paper at the end of Semester 1 and a 2-hour written paper at the end of Semester 2; a practical/oral examination (10%) and a slide test on eye disease recognition (15%) at the end of Semester 2.

**Prescribed texts:** R Berko R (ed), *The Merck Manual of Diagnosis and Therapy*, 16th ed., Merck Sharp and Dohme, 1992. • J J Kanski, *Clinical Ophthalmology*, 3rd ed., Butterworths, 1994. • D R Cullom and B Chang, *The Wills Eye Manual and Emergency Room Diagnosis and Treatment of Eye Disease*, 2nd ed., Philadelphia Lippincott, 1993.

### 655-352 Ophthalmic Prosthetics II

**Note:** This subject is only available to BOptom students.

**Credit points:** 12.5**HECS-band:** 2**Coordinator:** Dr E L Fletcher; Dr A S Bruce

**Prerequisites:** Optometry 655-101, 655-210, 655-351; biochemistry and molecular biology 521-204.

**Corequisites:** Optometry 655-330, 655-340; microbiology 526-306.

**Contact:** 36 lectures (three a week) and 12 hours of tutorials (*Semester 2*).

**Description:** On completion of this subject, students will have a broad understanding of contact lens practice. The subject covers the underlying physiological and optical principles of contact lenses, the measurement of contact lens specifications using relevant instrumentation, the handling of contact lenses and routine procedures for cleaning and disinfecting hard and soft contact lenses, the insertion and removal of hard and soft contact lenses; the conduct of a preliminary examination for contact lenses, techniques for assessment of the physical fit of contact lenses on the eye, the rationales behind current methods of fitting the various types of contact lenses including the high Dk soft extended wear lenses and the recognition, interpretation and management of signs and symptoms and abnormal conditions which may be induced by contact lens wear.

**Assessment:** A 3-hour written examination at the end of semester (100%).

**Prescribed texts:** A Gasson and J Morris, *J The Contact Lens Manual: A Practical Fitting Guide*, 2nd ed., Butterworth, 1998. • M Hom (ed), *Manual of Contact Lens Fitting and Prescribing*, Butterworth-Heinemann, 1997.

### 655-360 Psychophysical Aspects of Vision

**Credit points:** 6.25**HECS-band:** 2**Coordinator:** Dr M Kalloniatis

**Prerequisites:** Approval from head of department

**Contact:** 12 1-hour tutorials (*Semester 1*).

**Description:** The purpose of this subject is to provide candidates with a sound knowledge of bio-medical and psychophysical sciences in the context of understanding ocular anomalies and disorders. The course content will include basic psychophysical techniques as applied to understanding of the light sense, colour vision, form sense (spatial/temporal resolution) and the perception of depth.

**Assessment:** One 2 hour written examination at the end of semester.

**Prescribed texts:**

Students will be provided with a comprehensive study guide. Prescribed texts are from the American Academy of Ophthalmology Basic and Clinical Science Course. *Section 2 (Fundamental and Principles of Ophthalmology)* and *Section 5 (Neuro-Ophthalmology)* American Academy of Ophthalmology, 1998

### 655-410 Optometry

**Note:** This subject is only available to BOptom students.

**Credit points:** 87.5**HECS-band:** 2**Coordinator:** Prof N A McBrien

**Prerequisites:** Optometry 655-330, 655-340, 655-351, 655-352.

**Contact:** 60 lectures; 36 tutorials and seminars; 24 hours of ophthalmological case discussions; 72 hours of project work and no less than 450 hours of clinical work and clinical demonstrations. Clinical work and some lecture and some practical classes are held in the three weeks before Semester 1 and for three weeks between Semesters 1 and 2. Students are rostered to attend the

general, binocular vision, contact lens, and community health clinics of the Victorian College of Optometry, the Low Vision Clinic at Kooyong for 32 weeks, and the Broadmeadows Community Health Centre. Students are also rostered to attend two approved private practices in the city and the country. Students have the opportunity to undertake four to six weeks of clinical training in an overseas clinical setting in the weeks between semesters. Those who do not take an overseas externship spend one week in a country private practice (*Year long*).

**Description:** On completion of this subject, students will have a broad and strong command of their knowledge of the disorders of vision and their management; have developed a very high level of skill with optometric procedures and will be competent in the identification, diagnosis and resolution of patient visual problems. They will also be skilled in patient communication. The core of the subject is the examination and treatment of patients in the clinics of the Victorian College of Optometry and attendance at clinical demonstrations of patients exhibiting unusual clinical features. In addition, lectures and tutorials will provide detailed instruction in the management and rehabilitation of patients with severe visual impairment, the management of children's vision, management of ocular disease, general medicine with emphasis on those systemic diseases with ocular manifestations, and the diagnosis and management of abnormal colour vision. Students will also conduct a practical research project or detailed literature survey and complete a 6000 - 10 000 word dissertation. Students are also required to dispense a proportion of the spectacle prescriptions they write during their attendance at clinics and complete other dispensing assignments.

**Assessment:** Two 3-hour and one 2-hour end-of-year written examinations (42.5%); progressive assessment of clinical work during the year and a clinical examination at the end of Semester 1 (37.5%); a project dissertation on an approved subject (10%); an oral examination, written clinical reports and assessment of participation in review clinics (10%). Each component must be passed.

**Recommended texts:**

In addition to the prescribed texts purchased for second and third year subjects, students are strongly advised to purchase:

J D Bartlett and S D Janus, *Clinical Ocular Pharmacology*, 3rd ed., Butterworth-Heinemann, 1995.

### 655-420 Community Optometry & Prof. Standards

**Note:** This subject is only available to BOptom students.

**Credit points:** 12.5

**HECS-band:** 2

**Coordinator:** Prof N A McBrien

**Prerequisites:** Students must have passed all subjects at third year level before proceeding to this subject.

**Corequisites:** Optometry 655-410.

**Contact:** 36 lectures (three a week) (*Semester 2*).

**Description:** The general purpose of this subject is to acquaint students with the concepts of public health and the role of optometry in community health and to have a well-developed sense of their ethical, professional and legal responsibilities. The subject also sets out to provide students with the skills to provide advice to industry and commerce on visual ergonomics, visual standards and occupational eye protection. The subject covers the nature and scope of public health and public health optometry, human factors engineering and the alteration of the task and environment to improve visual performance, the principles of illuminating engineering, vision screening as a public health measure and the principles underlying the setting and administration of visual standards. A series of lectures deals with the theory and practice of accidents at work, the principles of accident prevention and their application to the prevention of eye injuries. There will be series of lectures on ethics, practice standards, the law in relation to optometry, and practice management.

**Assessment:** A 2-hour end-of-semester written examination (85%); lighting evaluation assignment (15%)

**Prescribed texts:** D G Pitts and R N Kleinstein, *Environmental Vision*, Butterworth-Heinemann, 1993.
