

Geography and environmental studies

The subjects offered by the School of Anthropology, Geography and Environmental Studies (SAGES) introduce students to modern concepts and methods in this major area of environmental studies. The subjects emphasise the principles of physical geography, provide examples of their operation in Australia and elsewhere, and give field experience putting those principles into practice. They also emphasise the interactions between the human population and the natural and built environments and the impacts of human activities on processes operating in the natural environment.

Geography is for those who are interested in exploring the following kinds of issues. How do physical and biological processes give form to the recognisable landscapes which we see around us? Have we mismanaged the Australian landscape? Why is stream flow more variable in Australia than elsewhere? Why is biodiversity higher in some places than in others, and why is conservation of biodiversity important to us? Are famines made by drought or by people? Can developmental and environmental concerns coexist?

Suggested subjects

The School of Anthropology, Geography and Environmental Studies offers a major in geography, and many subjects offered by the school are available to students wishing to complete a co-major or major in environmental science. In order to be able to successfully complete a major, it is essential to plan the appropriate prerequisite subjects at each year level.

Bachelor of Science students wishing to obtain a major in geography should take 25 points or more of first-year geography (science) subjects; and second and third-year geography subjects totalling 87.5 points, of which at least 50 points must be at the third-year level.

There is great scope for flexibility when planning your geography (science) course. It is nevertheless essential to ensure that you fulfil the requirements of the Bachelor of Science degree as set out in the Faculty of Science section of this Handbook.

Students majoring in geography are encouraged to consider applying for entry into the BSc (Honours) program.

Course advice is available from academic staff of the school during the course planning period and throughout the year. Students are welcome to make an appointment for course advice by contacting SAGES office, Tel. +61 3 8344 9311. Students are also welcome to contact individual subject lecturers for course advice during consultation hours.

100-level subjects

Two or three of the geography (science) subjects offered at 100-level.

One or more of the following subjects is also recommended:

- 650-111 Biology of Australian Flora & Fauna (*p.1*); 650-141 Biology of Cells and Organisms (*p.1*); 650-142 Genetics & The Evolution of Life (*p.1*); 625-101 Earth Sciences - The Global Environment (*p.1*); 625-102 Understanding Planet Earth (*p.1*). Students taking 121-172 Global Ecology and Biogeography (*p.2*) are strongly recommended to take biology 650-141 and 650-142..
- 620-160 Experimental Design & Data Analysis (*p.5*) and additional 100-level subjects from mathematics and statistics.

200-level subjects

Two or more of the geography (science) subjects offered at 200-level.

One or more of the following subjects is also recommended: 606-202 Plant Biodiversity (*p.1*); 606-204 Ecology: Communities and Ecosystems (*p.1*); 606-207 Flora of Victoria (*p.2*); 610-280 Environmental Chemistry (*p.5*); 654-204 Ecology: Individuals and Populations (*p.2*).

300-level subjects

Fifty points of geography (science) subjects offered at 300-level.

One or more of the following subjects are also recommended: 606-301 Applied Ecology (Theory) (*p.2*); 600-301 Problem Solving in Environmental Science (*p.1*); 451-312 GIS & Remote Sensing for Enviro Science (*p.7*); 654-308 Conservation Biology (*p.4*).

Bachelor of Science (Degree with Honours)

For information about the faculty and departmental entry requirements for honours, please refer to *Bachelor of Science (Degree with Honours)* and *Bachelor of Information Systems (Degree with Honours)* (*p.1*). These requirements should be considered when planning your course.

Geography and environmental studies subjects available for science credit

Careful attention should be paid to the level (eg. 200-level or 300-level) and number of science credit points that will be awarded for the completion of these subjects.

Geography subjects cannot count toward the BSc component of the Bachelor of Arts/Bachelor of Science combined course or the science requirement of the Bachelor of Arts and Sciences course. The only exception is 121-030 Applied Ecology. Students completing 121-030 may receive credit for this subject towards either the science or arts component of the BA/BSc or the BASc course. Students should advise the Faculty of Science Office if they would like 121-030 to count toward the science component of the BA/BSc or the BASc course.

Refer to the arts section of this Handbook for points details.

In addition to the subjects listed below, the School of Anthropology, Geography and Environmental Studies offer a number of subjects that are available as non-science credit. Refer to the geography section on page 1 and the environmental studies section on page 1.

100-level subjects

121-110 Famine in the Modern World

See full subject details on page 2.

121-171 Environmental Change

See full subject details on page 2.

121-172 Global Ecology and Biogeography

See full subject details on page 2.

200-level subjects

121-017 Society and Environments

See full subject details on page 2.

121-018 Geomorphology

See full subject details on page 3.

121-021 Environmental Politics and Management

See full subject details on page 3.

121-022 Development and Urban Environments

See full subject details on page 3.

121-222 Field Class in Geography

See full subject details on page 4.

121-227 Spatial Informatics and GIS

See full subject details on page 5.

121-229 Geographical Thought

See full subject details on page 5.

300-level subjects

121-028 Sustainable Development

See full subject details on page 3.

121-030 Applied Ecology

See full subject details on page 5.

121-033 Environmental Hydrology A

See full subject details on page 6.

121-071 Coastal Geomorphology

See full subject details on page 6.

121-310 Fluvial Geomorphology

See full subject details on page 6.

121-458 Australian Quaternary Environments

See full subject details on page 6.
