

Vax4Youth: Consent and COVID-19 Vaccination in Young People aged 12-17 years: Clinical, Legal, and Ethical Perspectives in Primary Health Care

A team of researchers from the Murdoch Children's Research Institute, the Royal Children's Hospital, the University of Melbourne, and the Australian Catholic University are conducting a study into young people's access to COVID-19 vaccination, particularly when without parental consent.

The team want to better understand what support and guidance is available to Community Pharmacists, and how to best support clinicians in this area. They request completion of a short 5-10 minute anonymous survey on your considerations and concerns if approached by a young person aged 12-17 years requesting COVID-19 vaccination without parental consent.

Participation is **voluntary** and responses will be kept **confidential**.

Participants who complete the survey will be invited to enter the draw to win one of ten **\$100 gift cards**.
